'Ovos' cylinder turn

Design concepts can be difficult to grasp. But in this case we have created one of the finest ergonomic range of door handles ever made. The comfortable Ovos grip fits the hand perfectly at forty-five degrees, a natural angle for operation.

The Ovos handle design is also excellent for use by the elderly and infirm, providing a secure strong grip without slipping. The return to door version provides a safe option as coats and trouser pockets cannot be caught or torn.

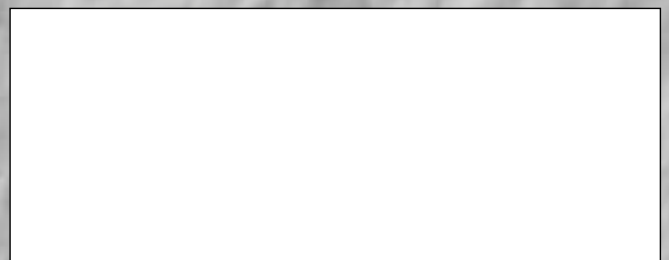

Ovos is manufactured from marine grade 316 stainless steel and is guaranteed for 30 years. The lever handles have ball bearing races and bolt through fixings for additional strength.

Ovos is competitively priced and suitable for any building. Two standard finishes are available; mirror polished (PS) and soft satin (SS).

Our fully trained (GAI) staff provide a scheduling service, and we supply complementary hinges, locks, door closers, and everything for fitting to doors.

We are always interested in manufacturing variations using the Ovos grip concept. Please contact our estimating department for more information.
